## Our Company

Nature Choice S.A.T. is a fruit and vegetable export company that has its own local farm producers who grow high quality produce. We are located in the southeast of Spain, in the provinces of Almeria and Granada. Our production locations are on the Mediterranean coast, with more than 3,200 hours of sunshine per year and mild temperatures during all twelve months of production.

We have sustainable solar greenhouses where we produce the highest quality vegetables, guaranteed by numerous certifications that permit us to export to world-wide destinations such as the United Kingdom, Scandinavia, Switzerland, all Europe, Canada and the United States.

## Growers

All our growers are specialists in different types of cucumbers, peppers, tomatoes, aubergines and zucchini throughout the year, plus melons and watermelons in the spring and summer months.

The advantage of managing our own production is that we have the ability to plan for the demands of our customers and the produce market. It also allows us to supply our customers throughout the year.

Our facilities are located in the heart of the west of Almeria.

## Acreditations and Certifications

In our commitment to our customers, traceability becomes a fundamental factor for our company.

From the seed, through the farm where it is grown, its grower, the treatment received by the product, its harvesting and subsequent classification, to the moment it is made available to consumers in the markets, we always guarantee the highest quality and safety in all processes.

We have certificates and acreditations in food safety, sustainability and good social practices.

## Export with guarantee

Our growers are specialized in the cultivation of fresh produce for both national and international distribution.

The same day the produce is harvested, it arrives at our modern handling facilities where the quality control team carefully evaluates the produce for its calibration, preparation and packaging.

In order to guarantee an optimal conservation until the moment of loading in the following hours, we carry out a quick pre-cooling in our cold stores.

Our commercial department manages the marketing and distribution of our products to European Union countries as well as the United Kingdom, Scandinavia, Switzerland, Canada and the United States.

## Mission

Providing essential horticultural products to the market while ensuring the highest quality throughout the entire process.

We have a team of professionals fully committed to providing solutions to our clients, adapting to their needs and those of the market at all times.

## Vision

To be a company recognized for our flexibility with customers, closeness to growers, and safety for our employees.

## Long Cucumber

We select the best varieties of Almería cucumber, long fruits of 25-35 cm and a diameter of 3-5 cm, with strong skin and a ribbed surface.

Our production guarantees the supply of this vegetable throughout the year, thanks to our farm locations in different micro-climates, with modern heating and ventilation systems in high-tech greenhouses.

## Aubergine

Our aubergine crops offer smooth-skinned, shiny fruit almost all year round, with a diameter ranging from 5 to 8 cm. The firm, smooth texture of the flesh along with excellent shelf life are key for our selection of specific varieties.

## Sweet Palermo

Sweet Palermo® peppers have a much higher brix content than other peppers, as they are rich in natural sugars and therefore much sweeter. They have smooth skin and few seeds, and they contain high amounts of vitamin C.

Our specialized growers guarantee the constant of this crop for you to enjoy our most delicious pepper at any time of year.

## Biological Pest Control

We use biological control for the treatment of diseases and pests, where living organisms and natural enemies are used to produce healthy and tasty fruits and vegetables.

Our commitment to quality begins with the choice of seed. Our technical department works with seed companies to select the varieties that best suit our methods and growing area. That is how we produce vegetables of the highest quality and supply them in most European Union markets while following the most demanding quality standards from the European Food Safety Agency and from the main distribution chains.
